

ACOUSTICS ADVISOR ENDORSEMENT SYDNEY METRO WEST (SSI 10038)

Review of:	Central Tunnelling Package: DNVIS for North Strathfield	Reviewed document reference:	21028-NV-RP-5-6
Prepared by:	, Alternate Acoustics Advisor		Revision 6
Date of issue:	17 October 2023		Dated: 22 September 2023

As approved alternate Acoustics Advisor (AA) for the Sydney Metro West project, I reviewed and provided comments on previous versions of Revision 6 of the Sydney Metro West – CTP – Detailed Noise and Vibration Impact Statement (DNVIS) for North Strathfield Station.

I am satisfied that my comments have been adequately addressed and I endorse Revision 6 of the DNVIS Addendum for North Strathfield Station for implementation, as per Condition of Approval A36(e), noting that, in addition to my notes on my endorsement of Revision 4:

- the DNVIS addresses construction within the North Strathfield Station box from Phase 1
 Site Establishment to Phase 4 TBM walkthrough, although Phase 4 will be reviewed in
 an update to the DNVIS once more detailed information on tunnelling methodologies has
 been developed.
- all activities in the DNVIS take place during Condition of Approval D35 Construction
 Hours. No activities included in Revision 6 of the DNVIS are proposed Out of Hours
 (OOH) within the North Strathfield Station box. (That is, no construction activities in the
 station box are proposed on Sundays, Public Holidays, evenings or night-times).

Noise level statistics

 $L_{\rm A90}$ - The A-weighted sound pressure level exceeded 90% of the monitoring period. This is considered to represent the background noise.

 L_{Aeq} - The equivalent continuous A-weighted noise level—the level of noise equivalent to the energy average of noise levels occurring over a measurement period.

 L_{A1} – The A-weighted sound pressure level exceeded 1% of the monitoring period.

 L_{Amax} – The maximum A-weighted noise level associated with the measurement period.

NML	Noise Management Level
PPV	Peak Particle Velocity – Measurement of ground-borne vibration in units of mm/s
RBL	Rating Background Level - a single figure that represents the background noise level for assessment purposes
ROL	Road Occupancy Licence – granted by Transport for NSW and required for any activity likely to impact on traffic flow.
Sound Power Level (SWL)	The A-weighted sound power level is a logarithmic ratio of the acoustic power output of a source relative to 10-12 watts and expressed in decibels. Sound power level is calculated from measured sound pressure levels and represents the level of total sound power radiated by a sound source.
Work	Any physical work to construct or facilitate the construction of the CSSI, including Low Impact Work, environmental management measures and utility work. However, does not include activities that informs or enables detailed design of the CSSI or generates noise that is not more than 5 dB(A) above the RBL at any sensitive land user(s)

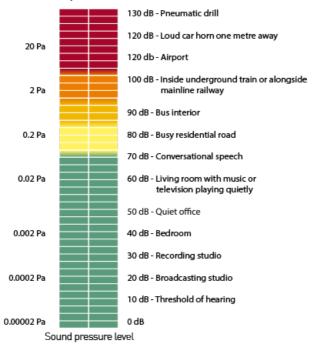

Sound Pressure Level (SPL)

This is the level of noise, usually expressed in dB(A), as measured by a standard sound level meter with a pressure microphone. The sound pressure level in dB(A) gives a close indication of the subjective loudness of noise.

A technical definition for the sound pressure level, in decibels, is 20 times the logarithm (base 10) of the ratio of any two quantities related to a given sound pressure to a reference pressure (typically 20 μ Pa equivalent to 0 dB). Examples of typical sound pressure levels are shown below.

Threshold of pain

Source: https://www.osha.gov/dts/osta/otm/noise/health_effects/soundpropagation.html

Tonal noise	Noise with perceptible and definite pitch or tone
VDV	Vibration dose value – used when assessing intermittent vibration as it is sensitive to peaks in vibration acceleration and accumulates the vibration energy received over the daytime and night-time periods

1. Introduction

1.1 Project overview

Sydney Metro is Australia's biggest public transport program comprising four main packages of work including Metro North West Line, Sydney Metro City and Southwest, Sydney Metro West and Sydney Metro Greater West. The Sydney Metro West component involves the construction and operation of a metro rail line, around 24km in length, between Westmead and the Sydney CBD.

The planning approvals and environmental impact assessment for Sydney Metro West has been split into a number of stages recognising the size of the project. This includes:

- Stage 1 Concept and all major civil construction works including station excavation and tunnelling between Westmead and The Bays. Planning approval for this stage was granted in March 2021.
- Stage 2 All major civil construction works including station excavation and tunnelling from The Bays to Sydney CBD
- Stage 3 Tunnel fit-out, construction of stations, ancillary facilities and station precincts, and operation and maintenance of the Sydney Metro West line

Acciona Ferrovial Joint Venture (AFJV) was commissioned to deliver the Central Tunnel Package of Stage 1, comprising excavation of five station boxes and around 11.5 kilometres of twin-bore tunnel between The Bays and Sydney Olympic Park (the Project). An overview of the Project is presented in Figure 1-1, which includes the tunnel alignment and location of the station boxes at:

- The Bays
- Five Dock
- Burwood North
- North Strathfield
- Sydney Olympic Park

Construction of North Strathfield Station box would take place adjacent to the existing North Strathfield train station and will include a number of phases:

- Site establishment
- Excavation of the station box
- Tunnelling
- Demobilisation

An overview of the site layout of North Strathfield is presented in Figure 1-2.

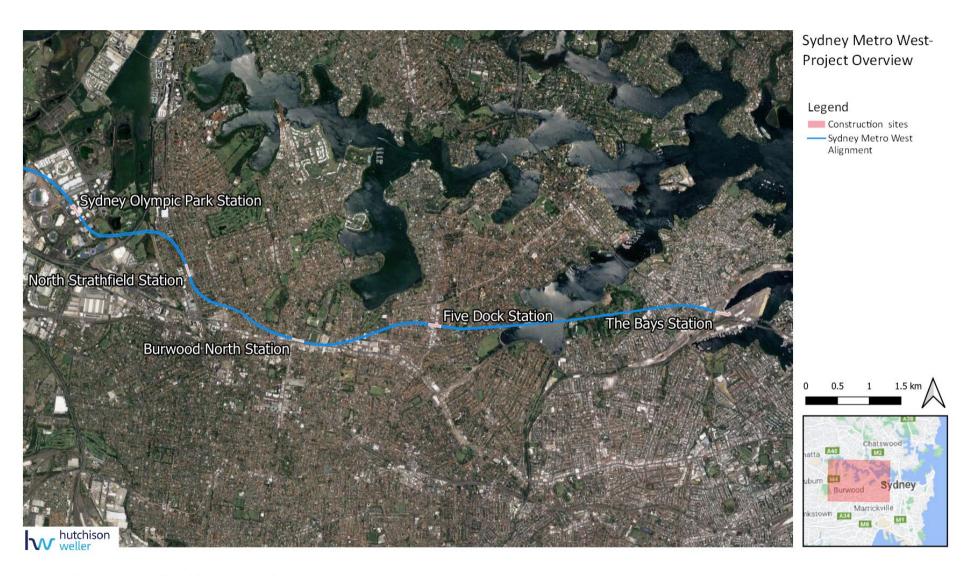

Figure 1-1 Overview of the CTP of Stage 1 of the Sydney Metro West Project.

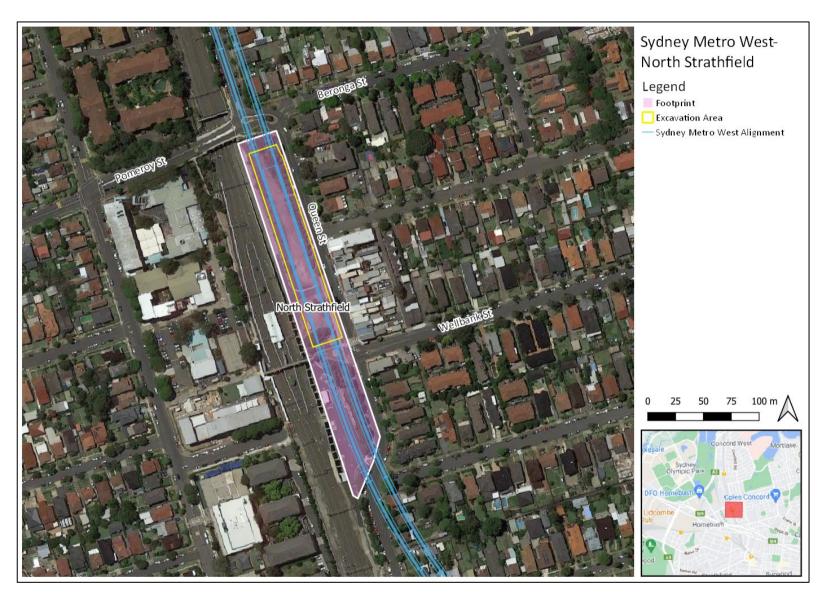

Figure 1-2 North Strathfield construction site

Considering the risk of noise and vibration impact is necessary to ensure appropriate mitigation and management measures can be applied. This Detailed Noise and Vibration Impact Assessment (DNVIS) has been prepared in accordance with the Sydney Metro (2020) Construction Noise and Vibration Standard, v 4.3 (CNVS) and supplements the Project's Construction Noise and Vibration Management Plan (CNVMP) as required in the Project's Condition of Approval (CoA) D43.

The objective of the DNVIS is to establish the location, nature and scale of proposed works, assess the level of impact on the community's amenity and include mitigation measures identified through consultation with affected sensitive land users.

This DNVIS addresses Phases 1 to 3 of the construction program. Phase 4 requires additional detail on tunnelling methodologies and will be assessed in a future revision of this DNVIS prior to commencement of activities related to Phase 4.

The structure of this DNVIS meets the requirements of the Condition of Approval D43 and the CNVS and includes:

- Section 2 Construction works and hours
- Section 3 Identification of noise and vibration sensitive receivers and existing noise levels
- Section 4 Construction noise and vibration objectives
- Section 5 Description of planned works, equipment and sound power levels
- Section 6 Construction noise assessment predicted noise levels and exceedances of objectives, including sleep disturbance
- Section 7 Construction vibration assessment
- Section 8 Traffic noise assessment
- Section 9 Mitigation and management, including consultation

2. Construction works and hours

2.1 Planned works

Activities associated with the North Strathfield station box are summarised in Table 2-1, which will be completed in 4 main phases generally following activities around establishment, excavation and tunnelling support and finally TBM passage.

Works are expected to commence in November 2021 and continue for around 3 years. The anticipated program is illustrated in Table 2-2 and shows the duration of each phase. Generally, Site establishment works up to excavation and retention would occur during standard hours of operation.

Once piling activities are complete, shaft excavation would start with excavation works lasting around 18-19 months. Tunnel support activities would occur with TBM walk through and use of conveyors for spoil management.

As described in Section 1.2, this DNVIS addresses phases 1 to 4. Phase 4 will be reviewed in an update to this DNVIS once more detailed information on tunnelling methodologies has been developed.

2.1.1 Approved construction hours

Working hours are set by CoA D35 to D36 as summarised in Table 2-3. Use of power saws, rock breakers, drills and other tonal or impulsive activities are defined as annoying under the Interim Construction Noise Guideline (ICNG) and are 'highly noise intensive works'.

Table 2-3 Approved construction hours

CoA	Construction activity	Monday to Friday	Saturday	Sunday / Public holiday
D35	Approved construction	7:00 am to 6:00 pm	8:00 am to 6:00 pm	No work (unless approved under out-of-hours work protocol)
D36	Highly noise intensive works	8:00 am to 6:00 pm ¹	8:00 am to 1:00 pm ¹	No work (unless approved under out-of-hours work protocol)

Notes:

1. if continuously, then not exceeding three hours, with a minimum cessation of work of not less than one hour.

2.1.2 Variations to work hours

In some circumstances, the planned construction activities would be undertaken outside the hours described in CoA D35 and D36. As specified in the Conditions of Approval, these activities include those which are:

- Low impact as described in CoA D37b), including:
 - i. construction that causes LAeq(15 minute) noise levels:
 - no more than 5 dB(A) above the rating background level at any residence in accordance with the ICNG, and
 - no more than the 'Noise affected' NMLs specified in Table 3 of the ICNG at other sensitive land user(s); and
 - ii. construction that causes LAFmax(15 minute) noise levels no more than 15 dB(A) above the rating background level at any residence; or
 - iii. construction that causes:
 - continuous or impulsive vibration values, measured at the most affected residence are no more than the preferred values for human exposure to vibration, specified in Table 2.2 of Assessing Vibration: a technical guideline (DEC, 2006), or
 - intermittent vibration values measured at the most affected residence are no more than the preferred values for human exposure to vibration, specified in Table 2.4 of Assessing Vibration: a technical guideline (DEC, 2006).
- By Prescribed Activity, as described in CoA D37d) and applying to North Strathfield construction scenarios:
 - i. tunnelling (excluding cut and cover tunnelling and surface works) which is permitted 24 hours a day, seven days a week; or
 - ii. delivery of material that is required to be delivered outside of standard construction hours in ConditionD35 of this schedule to directly support tunnelling activities
 - iii. work within an acoustic shed where there is no exceedance of noise levels under Low impact circumstances identified in (b) above, unless otherwise agreed by the Planning Secretary.

Where out-of-hours work is necessary, appropriate respite would be identified in consultation with the affected community, in line with the NVMP. As per CoA D51, consultation would include providing:

- a) a progressive schedule for periods no less than three (3) months, of likely out-of-hours work;
- b) a description of the potential work, location and duration of the out-of-hours work;
- c) the noise characteristics and likely noise levels of the work; and
- d) likely mitigation and management measures which aim to achieve the relevant NMLs (See Section 4) including circumstances of when respite or relocation offers would be available and details about how the affected community can access these offers.

3. Existing environment

3.1 Existing environment

The North Strathfield Station Box construction site is sandwiched between the existing North Strathfield train station and rail corridor and Queen Street in North Strathfield, as illustrated in Figure 1-2. The site covers an area of around 1.2 ha.

Land uses adjacent to the site are characterised by educational facilities to the west, across the existing rail corridor, with some residential dwellings to the south west, also adjacent to the rail corridor. A group of mixed-use commercial/residential buildings are located to the east of the site on Queen Street, bounded by Wellbank St and Waratah St. To the north of these buildings are residential dwellings that extend past the roundabout at the northern extremity of the site.

The acoustic environment is described in the EIS as dominated by traffic along the surrounding road network and existing rail line.

To assess and manage construction noise and vibration impacts, a detailed land use survey was prepared for the Project in line with CoA D34, with results of the survey are provided in the Construction Noise and Vibration Management Plan (CNVMP) and relevant land uses to North Strathfield are presented in Appendix A of this DNVIS.

3.2 Sensitive receivers

To assess and manage construction noise and vibration impacts, a detailed land use survey was prepared for the Project in line with CoA D34, with results of the survey are provided graphically in the Construction Noise and Vibration Management Plan (CNVMP) and relevant land uses to North Strathfield are presented in Appendix A of this DNVIS.

In summary, a number of residential and non-residential receivers have been identified and include:

- Residential receivers immediately opposite the site on Queen Street
- Non-residential receivers including:
 - o Our Lady of the Assumption Catholic Primary School in Hamilton Street
 - McDonald College George Street
 - Banter Speech and Language
 - Other businesses

Consultation with sensitive receivers is underway and continuing. Feedback to date is summarised in Section 7.1.5.

3.3 Heritage items

There are two items of heritage value area were identified in the EIS, which include the following. These items are not structural and haven't been considered further in the assessment of vibration impacts for this site.

- North Strathfield Railway Station Group Gardens
- Heritage street trees along Queen Street

3.4 Noise catchment areas

To facilitate the assessment of noise impacts from the project and to apply representative Noise Management Levels (NMLs) to all receivers, receivers adjacent to the North Strathfield sites have been divided into Noise Catchment Areas (NCAs).

NCAs group individual sensitive receivers by representative traits such as existing noise environment and potential exposure to noise and vibration from the Project.

NCAs were established as part of the EIS, are summarised in Table 3-1 and illustrated in Figure 1-1. Background noise monitoring has been completed as part of the EIS to apply appropriate NML to each NCA (see Section 4.2).

Table 3-1 Summary of work areas, Noise Catchment Areas and land uses

NCA	Location	Description	Ambient noise influences
NCA10	North Strathfield, West of the existing rail corridor	A group of educational facilities to the which include McDonald College and Our Lady of the Assumption Primary School. Residential dwellings comprise the balance of sensitive receivers	Existing noise is influenced by the surrounding road network and existing rail line. The area surrounding the Construction Site is generally suburban with a mixture of residential,
NCA11	North Strathfield, East of the existing rail corridor	Mainly residential, with a small group of mixed-use commercial/ residential receivers along Queen Street	commercial and educational receivers.

3.5 Background noise survey

Background noise monitoring was undertaken as part of the wider Sydney Metro West Project EIS (Section 2, Technical Paper 2) through unattended background noise monitoring at representative locations. Monitoring was completed in March and July 2019 for each of the NCAs listed in Table 3-1.

The North Strathfield area is heavily influenced by traffic flows that generate lower noise levels during the night-time than the daytime and evening periods. This pattern of reduced noise levels in the evening and night time is characteristic of urban and suburban areas, where there is no industrial or infrastructure noise influences.

The baseline information was used to establish the Rating Background Level (RBL), which represents the average minimum background sound level for each measurement period, averaged over the measurement days. The RBL at each NCA is provided in Table 3-2.

Table 3-2 Background noise levels

	Noise level (dBA) ¹										
NCA	Day ²	Evening ²	Night ²								
NCA10	47	47	44								
NCA11	51	47	39								

Notes:

- 1. The RBL values have been extracted from the EIS; refer to Table 4 in the EIS Technical Paper 2.
- 2. Daytime is 7:00am to 6:00pm, evening is 6:00pm to 10:00pm and night-time is 10:00pm to 7:00am.

4. Noise and vibration assessment criteria

4.1 Overview

Project CoA D43 requires planned works to be assessed within this DNVIS where any planned works may exceed the NMLs, vibration criteria and/or ground-borne noise levels specified in CoA D39 and D40 at any residence outside construction hours identified in CoA D35, or where receivers will be highly noise affected.

This DNVIS includes specific mitigation measures identified through consultation with affected sensitive land user(s) and these mitigation measures will be implemented for the duration of the early works investigations.

This DNVIS has been provided to the AA and ER before the commencement of the planned works.

CoA D39 requires noise and vibration from construction activity to be managed with guidance from:

- Noise: the Interim Construction Noise Guideline (ICNG, DECC 2009)
- Vibration for human exposure: Assessing Vibration: A Technical Guideline (DEC, 2006)
- Vibration for building damage: BS 7385 Part 2-1993 Evaluation and measurement for vibration in buildings Part 2, and
- Vibration for damage of unsound heritage items: DIN 4150-3 Structural Vibration effects of vibration on structures.

The over-arching document for assessment and management of noise and vibration impacts on this Sydney Metro project is the Sydney Metro *Construction Noise and Vibration Standard* (CNVS, vers. 4.3, Transport for NSW 2020). The following sections outline the framework of these guidelines and the way this DNVIS will assist to assess and manage impacts.

4.2 Noise

4.2.1 ICNG

The CNVS refers to the *Interim Construction Noise Guideline* (ICNG) (DECC 2009), which provides guidance on management of construction noise. The ICNG notes noise that exceeds background noise levels may result in adverse impacts and an increased likelihood of complaints.

During approved hours, where construction noise is within 10 dB(A) of the RBL, impacts are considered acceptable. Where construction noise is more than 10 dB(A) above the RBL, a residential receiver is taken to be noise affected and the proponent should undertake all reasonable and feasible steps to manage the impact and consult with the affected community.

Above a $L_{Aeq, 15 \text{ minute}}$ noise level of 75 dB(A), a residential receiver is considered to be highly noise affected, requiring respite to be given in consultation with the regulatory authority and the community.

Outside approved construction hours, construction noise at a residential receiver more than 5 dB(A) above the RBL is taken to be noise affected.

In addition, noise from activities/equipment such as rock hammers, impact piling, or other impulsive noise sources usually result in greater annoyance than continuous construction noise. A 5 dB(A) penalty is applicable to such activities prior to comparison with the NMLs and a 3 hours on, 1 hour off respite schedule applies.

A noise level above $L_{Aeq \, 15min}$ 70 dB(A) at a commercial property is considered to warrant noise mitigation. Similarly, an industrial facility would warrant noise mitigation at $L_{Aeq \, 15 \, minute}$ noise levels above 75 dB(A).

Table 4-1 presents management levels for noise at other relevant sensitive land uses based on the principle that the characteristic activities for each of these land uses should not be unduly disturbed.

Internal noise levels are assessed at the centre of the occupied room. Where internal noise levels cannot be measured, external noise levels may be used. A conservative estimate of the difference between internal and external noise levels is 10 dB for buildings other than residences.

Table 4-1 NMLs for non-residential sensitive receivers

Sensitive receiver type	NML applicable when in use,
	LAeq, 15 min
Classrooms at schools and other educational institutions	Internal noise level 45 dB(A)
Childcare centres	
- sleeping areas	Internal noise level 45 dB(A)
- play areas	External noise level 65 dB(A)
Hospital wards and operating theatres	Internal noise level 45 dB(A)
Places of worship	Internal noise level 45 dB(A)
Active recreation areas (characterised by sporting activities and	External noise level 65 dB(A)
activities which generate their own noise or focus for participants,	
making them less sensitive to external noise intrusion)	
Passive recreation areas (characterised by contemplative activities that	External noise level 60 dB(A)
generate little noise and where benefits are compromised by external	
noise intrusion, for example, reading, meditation)	
Community centres	Refer to the recommended 'maximum' internal
	levels in AS2107 for specific uses.

4.2.2 Sleep disturbance

The CNVS requires maximum noise levels to be analysed in terms of the extent and number of times the maximum noise exceeds specific noise trigger levels, in general accordance with the Noise Policy for Industry (NPfI) (EPA 2017). These triggers are:

- LAeq, 15 minute 40 dBA or the prevailing RBL plus 5 dB, whichever is greater, and the
- LAmax 52 dBA or the prevailing RBL plus 15 dB, whichever is greater.

The NPfI also recommends the DECCW (2011) Road Noise Policy (RNP) be reviewed for further risk assessment. The RNP recommends maximum internal noise levels below 50–55 dB(A) are unlikely to awaken people from sleep and one or two noise events per night, with maximum internal noise levels of 65–70 dB(A), are not likely to affect health and wellbeing significantly.

4.2.3 Ground-borne noise

CoA D40 requires all reasonable and feasible mitigation measures to be applied when the following residential ground-borne noise levels are exceeded. These levels are only applicable when ground-borne noise levels are higher than airborne noise levels at residential receivers during the evening and night periods.

- a) evening (6:00 pm to 10:00 pm) internal LAeq(15 minute): 40 dB(A); and
- b) night (10:00 pm to 7:00 am) internal LAeq(15 minute): 35 dB(A).

4.2.4 Construction traffic

While operating within the construction site, construction vehicles are assessed as part of the construction activity of which they are a part. However, once these vehicles leave the construction site and enter public roads, they are assessed as road traffic.

The Road Noise Policy (RNP) is generally adopted to assess the impact of construction traffic on public roads. A screening test is first applied to establish whether existing road traffic noise levels will increase by more than 2 dB due to construction traffic. Where any noise increase is less than 2 dB, the objectives of the Road Noise Policy have been met.

The CNVS recommends, where the road traffic noise levels are predicted to increase by more than 2 dB as a result of construction traffic, consideration should be given to feasible and reasonable noise mitigation measures to reduce the potential noise impacts and preserve acoustic amenity.

In considering feasible and reasonable mitigation measures, the actual noise levels associated with construction traffic and whether these levels comply with the road traffic noise criteria in the RNP would be reviewed.

- 60 dB LAeq(15hour) day and 55 dB LAeq(9hour) night for existing freeway/ arterial/ sub-arterial roads.
- 55 dB LAeq(1hour) day and 50 dB LAeq(1hour) night for existing local roads.

4.2.5 Additional mitigation measures

The CNVS builds on the guidance provided by the ICNG and recommended further mitigation measures where all reasonable and feasible mitigation measures to minimise noise at the nearest receivers have been implemented and construction noise is still predicted to exceed the noise or vibration objectives. The Additional Mitigation Measures Matrix (AMMM) for airborne and ground-borne noise taken from the CNVS are presented in Table 4-2 and Table 4-3.

Table 4-2 Additional Mitigation Measures Matrix for airborne noise (CNVS)

Construction hours	dB above NML	Additional management measures
Approved hours	0 to 10	-
Monday – Friday: 7am – 6pm	10 to 20	LB
Saturday: 8am to 6pm	20 to 30	LB, M, SN
	>30	LB, M, SN
Evening	0 to 10	LB
Monday – Friday: 6pm – 10pm	10 to 20	LB, M
Saturday: 7am – 8am, 6pm – 10pm	20 to 30	LB, M, SN, RO
Sunday / PH: 8am – 6pm	> 30	LB, M, SN, IB, PC, RO
Night	0 to 10	LB
Monday – Saturday: 10am – 7am	10 to 20	LB, M, SN, RO
Saturday: 10pm –8am)	20 to 30	LB, M, SN, IB, PC, RO, AA
Sunday / PH: 6pm –7am	> 30	LB, M, SN, IB, PC, RO, AA

Notes: PC = Phone Calls and emails

M = Monitoring

IB = Individual briefings

AA = Alternative accommodation

SN = Specific notification

LB = Letterbox drops

RO = Project specific respite offer

Table 4-3 Additional Mitigation Measures Matrix for ground-borne noise (CNVS)

Construction hours	dB above NML	Additional management measures				
Approved hours Monday – Friday: 7am – 6pm Saturday: 8am to 6pm	No NML for ground-borne noise during standard hours (refer to Table 4-7)					
Evening	0 to 10	LB				
Monday – Friday: 6pm – 10pm Saturday: 7am – 8am, 6pm – 10pm	10 to 20	LB, M, SN				
Sunday / PH: 8am – 6pm	> 20	LB, M, SN, IB, PC, RO				
Night	0 to 10	LB, M, SN				
Monday – Saturday: 10am – 7am Saturday: 10pm –8am)	10 to 20	LB, M, SN, IB, PC, RO, AA				
Sunday / PH: 6pm –7am	> 20	LB, M, SN, IB, PC, RO, AA				

Notes: PN = Project notification SN = Specific notification

M = monitoring LB = Letterbox drops IB = Individual briefings DR = Duration reduction

AA = Alternative accommodation RO = Project specific respite offer

4.3 Project-specific construction noise management levels

Based on the measured RBLs for each NCA and requirements of the ICNG and CNVS, project-specific NMLs are summarised in Table 4-4. NMLs for non-residential receivers are described in Table 4-1.

Table 4-4 Noise management levels

NCA	Noise Management Level, LAeq 15 minute												
	Appro	ved hours		Outside approved hours									
	Noise affected	Highly noise affected	Day	Evening	Night	Sleep disturba	nce (CNVS)						
	directed	unceted				L _{Aeq, 15} minute	L _{Amax}						
NCA10	57	75	52	52	49	49	59						
NCA11	61	75	56	52	44	44	54						

4.4 Vibration management

4.4.1 Human comfort

When assessing human exposure to construction-related vibration, the CNVS requires vibration goals to be established using *Environmental Noise Management Assessing Vibration: A Technical Guideline* (DECC 2006), which provides criteria for the assessment of vibration impacts on humans.

Construction activities typically generate vibration of an intermittent nature, which is assessed using a Vibration Dose Value (VDV). Acceptable values of vibration doses are presented in Table 4-5 for sensitive receivers.

Table 4-5 VDV Vibration criteria

Receiver type	Low probability of adverse comment (m/s ^{1.75})	Adverse comment possible (m/s ^{1.75})	Adverse comment probable (m/s ^{1.75})
Residential buildings – 16 hour day $(7am to 11pm)^1$	0.2 to 0.4	0.4 to 0.8	0.8 to 1.6
Residential buildings – 8 hour night (11pm to 7am) ¹	0.13	0.26	0.51

Note 1: Day time and night time as described in BS6472:1992 (as referenced in the CNVS), i.e. a daytime period of 16 h or a night time period of 8 h, for example 23.00 h to 07.00 h.

4.4.2 Buildings

Potential building damage from construction vibration requires the application of values in BS 7385 Part 2-1993 *Evaluation and measurement for vibration in buildings* Part 2. These values are presented in Table 4-6 and relate to transient vibration which does not give rise to resonant responses in structures, and to low-rise buildings.

Table 4-6 Guideline values for vibration velocity for the effects of short-term vibration on structures (BS 7385).

Line	Type of building	Peak component particle velocity in frequency range of predominant pulse						
		4 Hz to 15 Hz	15 Hz and above					
1	Reinforced or framed structures Industrial and heavy commercial buildings		50					
2	Unreinforced or light framed structures Residential or light commercial type buildings	15 at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz to 50 mm/s at 40 Hz and above					

Where vibration may give rise to magnification due to resonance, especially at lower frequencies where lower guide values apply, the guide values may be reduced by 50%. The CNVS describes rock breaking/hammering and sheet piling activities as having potential to cause dynamic loading in some structures (e.g. residences).

For activity involving rock breakers, piling rigs, vibratory rollers, excavators, vibration predominantly occurs at frequencies in the 10 Hz to 100 Hz range. On this basis, a conservative vibration damage screening level is:

Reinforced or framed structures: 25.0 mm/s

Unreinforced or light framed structures: 7.5 mm/s

4.4.3 Heritage

Undocumented heritage structures would be assessed under a conservative cosmetic damage objectives of 2.5 mm/s peak component particle velocity (from DIN 4150). Where vibration levels at heritage items are identified as exceeding this screening level, structural assessment would be completed by the Project team to confirm the structure's sensitivity to vibration. If a heritage structure is found to be structurally unsound (following

inspection) the conservative criterion would stand. Where the structure is suitably sound, the guideline values from Table 4-6 would be applicable.

4.4.4 Additional mitigation measures

The CNVS recommends additional mitigation measures where all standard mitigation measures to minimise vibration at the nearest receivers have been implemented and vibration is still predicted to exceed the maximum guideline values. The Additional Mitigation Measures Matrix (AMMM) for vibration from the CNVS is presented in Table 4-7. Acronyms are defined at Table 4-2.

Table 4-7 Additional Vibration Mitigation Measures (CNVS)

Construction hours	Mitigation measures where predicted vibration levels exceed maximum levels
Approved hours Monday – Friday: 7am – 6pm, Saturday: 8am to 6pm	LB, M, RO
Evening Monday – Friday: 6pm – 10pm; Saturday: 7am – 8am, 6pm – 10pm; Sunday / PH: 8am – 6pm	LB, M, IB, PC, RO, SN
Night Monday – Saturday: 10am – 7am Saturday: 10pm –8am); Sunday / PH: 6pm –7am	LB, M, IB, PC, RO, SN, AA

Notes

PN = Project notification
M = monitoring
B = Individual briefings

SN = Specific notification
LB = Letterbox drops
DR = Duration reduction

AA = Alternative accommodation RO = Project specific respite offer

5. Impact assessment

5.1 Plant and equipment

A summary of proposed activities at the North Strathfield sites was provided in Table 2-1. Nominal equipment and estimated sound power levels of each item and activity are presented in Appendix B.

Over the day, evening and night periods, equipment types and numbers will vary, with no works proposed outside standard hours.

During site establishment it is likely that several activities would be undertaken concurrently so cumulative impacts have been assessed as part of this DNVIS.

The noise predictions in this DNVIS represent a realistic worst-case scenario when construction occurs at a work location nearest to residences and other sensitive receivers. A worst-case impact assessment assumes one hundred percent of the equipment operational at the nearest receiver location at all times. A reasonable assessment of worst case is based on the quantities of plant in the equipment list in Appendix B, a subset of all equipment for the site, which also includes representative usage factors for each item of equipment.

When considering activities at each receiver, noise levels will vary during the construction period based on:

- the number of plant items operating at any one time
- plant and equipment location on site and relative to a sensitive receiver
- the actual SWLs of plant and equipment and their operating durations in an assessment period

5.2 Noise modelling

SoundPlan noise modelling software was used to calculate noise impacts in accordance with the ISO9613 prediction method at all identified noise-sensitive receivers. The model included:

- Topography 1 metre DEM based on LPI Lidar data.
- Individual buildings for façade calculations and to account for shielding and reflections. Building heights are also taken from Lidar data.
- Individual sensitive receivers One receiver location representing each residential dwelling and located 1.5 metres above most affected floor level (e.g. level 2) and most-affected façade at up to around 600 metres radius.
- Construction noise sources –Activities and equipment included in the noise model as area sources in locations specified by AFJV. SoundPlan takes the worst-case point within each area to perform its calculations, a conservative approach. Sound power levels in Appendix B. Source is modelled at 1.5 metres above ground.
- Each phase of work was modelled to account for the benefit from site hoarding during the establishment phase.
- Meteorology –worst-case conditions: gentle breeze (3-5 m/s) source to receiver and stable conditions (conducive of temperature inversion).

5.3 Mitigation measures included in the modelling

Mitigation measures would be implemented to ameliorate noise impacts as standard practice throughout the works. Mitigation measures, which may affect the predicted levels include the following, which have been incorporated in the assessment as base assumptions for noise predictions.

Source noise control strategies:

- Where the NML outside approved hours cannot be achieved, work is not proposed to be undertaken unless unavoidable and completed under the procedures contained in the CNVMP.
- Equipment sound power levels will not exceed those described in Table 13 of the CNVS.
- Residential grade mufflers fitted to all mobile plant, with equipment maintained and operated effectively.
- Use of rock hammers would be minimised where possible during excavation of the North Strathfield site
- Where non percussive drill rigs are used, a reduction of around 10 dB in comparison to similar percussive models
- No shouting or swearing or playing of loud radios
- Engine and exhaust brakes avoided
- Stationary plant placed behind larger objects or as far from receivers as possible
- Engines switched off when not in use for extended periods (15 minutes) and no idling trucks in front of residences
- Dropping of heavy objects or metal-on-metal impacts avoided
- Non-tonal reverse alarms installed on all mobile equipment regularly used on the project.

The above measures have been included in the assessment and are reiterated in Section 7.

Noise barrier control strategies:

- Hoarding of 3 metres in height that doubles as a security barrier and has been included in the model between the site entry and exit gates on Queens Road (see Figure 5-1). This location directly impacts commercial and residential receivers opposite the load out and temporary access area. Hoarding from the exit gate up to Pomeroy Road is a minimum of 2.4 metres in height with fencing around the rest of the site modelled as chain/screen fencing.

Acoustic sheds

- No acoustic sheds are proposed at this site.

Figure 5-1 North Strathfield Hoarding Layout

Figure 5-2 North Strathfield Hoarding in situ

6. Predicted noise levels

6.1.1 Overview

Construction work at North Strathfield is programmed during approved construction hours for all activities. A summary of predicted noise levels is provided in the following sections for each construction phase. Detailed results for all sensitive receivers are provided in Appendix D.

Noise contours for typical noisy activities are presented in Appendix C. The contours demonstrate the extent of the worst-case cumulative impacts and illustrate how local topography provides additional screening for nearby receivers, which improves with additional depth gained in the excavation phase of the works.

6.1.2 Phase 1 - Site establishment

A summary of maximum predicted noise levels at residential and non-residential land uses and predicted exceedances of the NMLs are presented in Table 6-1.

Site establishment would be completed during approved hours, with exceedances of the NML predicted foreach activity. Th majority of exceedances would be minor (<10 dB); however earthworks may result in around 17 receivers experiencing noise levels between 10 and 20 dB above NML. These impacts represent a low to moderate risk on the surrounding community during approved hours.

Some residential receivers are likely to be highly noise affected (>75 dBA) at times during earthworks where works are at the existing ground level, with up to 8 receivers predicted to experience noise at this magnitude when works are at their worst-case position on site.

6.1.3 Phase 2 and 3 - Station Box construction

A summary of noise level impacts for this phase of works is presented in Table 6-2.

Station box construction activities will commence with surface works in the excavation zone shown in Figure 1-2. These works include piling, pouring and breaking back of capping beams and installation of active ground anchors.

The highest impact during the initial part of excavation will be from the stripping material other than rock (OTR) from the surface to around 5 metres below ground level. When the works are located at the surface up to 109 receivers may experience exceedances of the daytime NML of up to 10 dB, and around 22 receivers experiencing impacts in the 10-20 dB range, with 21 receivers predicted to experience levels in the highly noise affected range above 75 dBA.

Noise impacts will decrease as works progress to rippable spoil below 5 metres, with shielding from the excavation providing noise reductions for all later stage activities. As the depth of the station box increases and harder material is encountered, the intermittent use of rock hammers may be necessary where ripping is not possible or profiling or detailed excavation is required Where rock hammers are used around 40 receiver locations may experience exceedances of the daytime NML of up to 10 dB with 17 receivers experiencing impacts in the 10-20 dB range. Up to 9 receivers would experience noise levels in the highly noise affected range above 75 dBA.

Cumulative impacts from the continuous loading and transport of spoil from site during the OTR and ripping activities has been assessed with only a marginal increase in overall noise impacts for each stage.

Nozzle excavation will require the use of a rock hammer for the duration of this work however, as the works progress into the tunnel portal, the predicted noise levels will decease as local shielding increases. Up to 26 receivers may experience exceedances of the daytime NML of up to 10 dB during the early stage of these works

Table 6-1 Summary of predicted NML exceedances for Stage 1 – Site establishment

4a	TBM walkthrough	50	50	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

6.1.4 Sleep disturbance

There are no activities occurring outside standard hours and therefore no assessment of sleep disturbance has been completed for this site.

Other out of hours work such as utility relocations and oversized plant, may be undertaken where they comply with CoA D37 and EPL 21610 and these works would be assessed through the out of hours works process.

6.2 Ground-borne noise

The requirement to consider ground-borne noise is applicable to tunnelling or other subterranean works which have the potential to generate internal noise impacts within a sensitive receiver. However, as discussed in Section 4.2.3, ground-borne noise is only assessed for the evening and night periods in residential locations. During excavation of the station box, vibration-intensive equipment such as vibratory rollers and drill rig/rock bolters would be used but these would only be during standard hours and airborne noise is expected to result in noise levels greater than the ground-borne noise component.

Therefore, ground-borne noise has not been considered further in this DNVIS. Once tunnelling commences, this matter will be reviewed as part of the revised DNVIS for activities outside approved hours.

6.3 Vibration impact assessment

6.3.1 Assessment method and reference data

Vibration-intensive surface works will form part of site establishment and ongoing excavation works for the duration of the Project. Potential items of plant that can generate vibration impacts are:

- Rock hammers
- Vibratory rollers
- Percussive drills
- Dozer with ripper

To assess the likelihood of impacts on human comfort and structures, reference vibration levels are summarised in Table 6-3 and curves of vibration with distance are presented in Figure 6-1. Reference vibration levels are based on previously measured levels.

Table 6-3 Summary of vibration-intensive activities

Activity	Typical equipment	Typical PPV vibration emission levels	Source
Rock hammer (large)	47 t Excavator with hammer	4.8 mm/s at 10 m	Site measurement
Site compaction	Vibratory roller 20 t	4.5 mm/s at 10 m	Site measurement
Rock hammer (medium)	20 t Excavator with hammer	2.9 mm/s at 10 m	Site measurement
Percussive drilling	Airtrack drill or similar	1.5 mm/s at 10 m	Site measurement
Rock bolting	Jumbo bolter	0.4 mm/s at 2.5 m	Site measurement
Ripping	Dozer in Sydney Sandstone	0.15 mm/s at 10 m	Site measurement

Based on the estimated vibration emission levels of each activity and the following equation for geometric damping (conservatively ignoring material damping), levels of vibration with distance can be estimated.

$$PPV_2 = PPV_1 \left(\frac{R_1}{R_2}\right)^n$$

Where:

PPV - Peak Particle Velocity at the source (PPV₁) and Receiver (PPV₂)

R – distance from source of reference level (R_1) and distance from source of receiver (R_2)

n – ground factor assumed as 1.7 for body waves near the ground surface

Predicted levels of vibration over distance are summarised in the following sections.

6.3.2 Risk of cosmetic damage

Predicted levels of vibration over distance are illustrated in Figure 6-1. Considering the vibration guideline values prescribed in the CNVS of 7.5 mm/s for unreinforced or light framed structures such as the residential buildings near the site, the risk of cosmetic damage is low for equipment outside 7.5 metres from the source. Where unsound heritage items are present, with a guideline value of 2.5 mm, the risk of damage increases below about 15 metres.

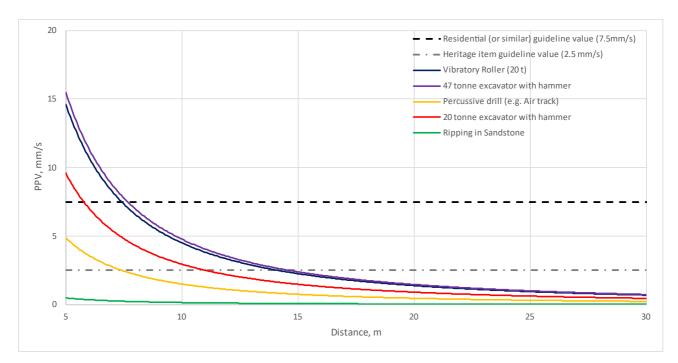

Figure 6-1 Curves of vibration with distance from the source

Contours representing the distance at which the vibration guideline values for each item are predicted to be achieved are presented in Appendix C. Where sensitive structures are within the buffer distance, trial monitoring should be undertaken prior to any works commencing to determine actual vibration levels.

The nearest buildings are commercial structures, outside the nominal buffer distances and the risk of vibration impact is low. There are no heritage structures that have been identified for the site.

Where equipment changes, monitoring and establishment of a site-specific vibration curve would be undertaken.

Consideration of vibration generating activities should include alternative methods where necessary to minimise vibration risk, such as:

- Employ non-vibratory (static) rolling methods for compaction where practicable.
- Use a ripper and bucket in place of a hammer where possible.
- During the establishment phase, use smallest available vibration generating equipment for activities close to the site boundary.

Details of the locations for monitoring will be included in a specific vibration monitoring programme for the North Strathfield site to be developed in conjunction with the appropriate stakeholders as part of the noise and vibration monitoring programme detailed in the Project CEMP.

6.3.3 Human exposure

The CNVIS applies vibration dose value (VDV) criteria to residential buildings over the day and night periods. Acceptable VDV for intermittent vibration from *Assessing Vibration: A technical Guideline* (DEC 2006) have been referred to assess potential impacts for vibratory rolling near the boundary of the site, closest to residential buildings. These guidelines require a maximum VDV of 0.2 m/s^{1.75} in for habitable areas during the daytime.

Over site establishment, typical vibration-intensive activities such as vibratory rolling and soil/rock drilling are unlikely to result in extended periods of vibration that would exceed the nominal VDV. To estimate the vibration dose value of a vibratory roller, the estimated VDV (eVDV) equation from DEC 2006 has been used:

$$eVDV = 1.4 \times a \times t^{0.25}$$

where a represents the root mean square (rms) vibration acceleration in m/s^2 and t is the duration of the activity in seconds. Since we only have velocity values for vibration, acceleration is substituted for velocity by the following equation:

$$a_{rms} = 2 \times \pi \times f \times v_{rms} / 1000$$

where f is the dominant frequency of the vibration and v is the root mean square (rms) velocity.

The rms velocity was derived from the peak particle velocity assuming a crest factor (the ratio of the peak value to its rms value) of 4.

eVDVs for durations of between 1 hour and 8 hours, are presented in Figure 6-2 and show the VDV at various distances from the source for a range of exposure durations. From the graph, impacts during the daytime would result in possible adverse comment within about 15 metres from the source for a total of up to 4 hours of work. For shorter durations, the buffer distance would be smaller. It is unlikely that total rolling activities would exceed 4 hours at any one location for this site.

Human exposure to vibration applies when a sensitive receiver is impacted in a habitable room, where no receiver is present, human comfort criteria would not apply. In addition, where the work moves further from the impacted building a reduced impact would be predicted and duration of exposure would increase proportionally.

Human comfort should be assessed inside the residence at the centre of a habitable room. Therefore, the building's construction, how many floors, how the building is coupled to the ground and the distance to the nearest habitable room would influence the actual levels measured during compaction and would likely be lower than predicted.

Vibration contours are presented in Appendix C and illustrate the receivers that may fall within the 15 metre contours for possible adverse comment during daytime hours. No receivers are predicted to experience vibration in excess of human comfort criteria.

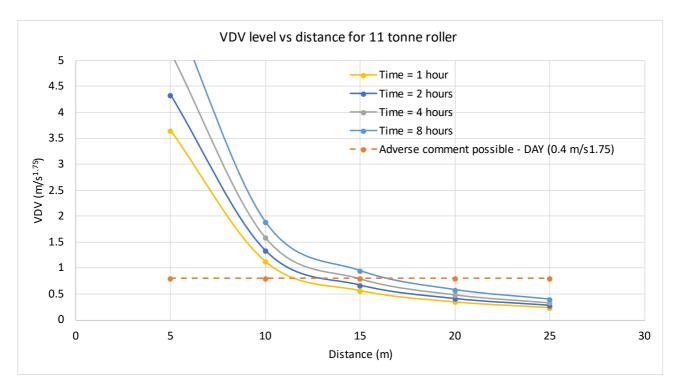

Figure 6-2 VDV curves for excavator and hammer

6.4 Construction traffic

Heavy vehicle movements related to the North Strathfield site activities will comprise deliveries of materials and equipment as well as spoil haulage during excavation.

All heavy vehicles would enter the site via Concord Avenue then down Wellbank Street past existing residential receivers, entering the site at the corner of Wellbank and Queen Street at Gate NST02. After loading or unloading, the vehicles exit via Gate NST03 to create a circular traffic flow as indicated in Figure 6-3. Exiting vehicles would continue north along Queen Street and turn left onto Pomeroy Street.

Approximately 8 heavy vehicles are expected to access and leave the site each hour during the peak excavation period. These movements would be during approved hours only.

The EIS noted that no roads around the North Strathfield site are anticipated to have a greater than 2 dB increase in road traffic noise. However, this conclusion should be verified by obtaining site-specific traffic data.

Figure 6-3 North Strathfield construction traffic movement and indicative site layout

7. Summary and recommendations

7.1.1 Impact summary

This DNVIS has established that during some early construction activities, noise and vibration is likely to result in adverse impacts on the local community, with residents directly adjacent to the works to experience the greatest level of impact. In NCA 10 and 11 the NMLs at night reduce to very low levels; however, no work outside of approved hours is programmed for shaft excavation, which minimises the risk of impacts for noise sensitive receivers.

Out of hours work will be required for works outside the scope of this DNVIS such as out of hours utility relocations and oversized plant deliveries and this will be assessed through the out of hours work process. These activities may cause impacts above NML and sleep disturbance levels and mitigation measures such as offering alternative accommodation will be implemented as required. Out of hours work may also occur for work that is predicted to be below NML.

Predicted noise levels for this assessment identify likely equipment combinations from the overall equipment list, working near the most affected location for each receiver. This provides a typical 'worst case' noise level that may be reasonably expected over the course of the modelled construction activity. The impacts from these activities will vary based on the location and type of building for each noise sensitive receiver.

During the site establishment and early excavation ground works for the station box, some activities are likely to result in highly intrusive noise at worst-case locations. These impacts will be managed with a combination of physical mitigation and community consultation / respite (see Table 7-1).

The mix of residential, commercial and transport infrastructure in this location provides a range of impacts against the ambient daytime noise levels. As the works progress to lower levels with the station box, the benefit of shielding will increase with the surface activities providing the closest noise sources for receivers in Queen Street.

Airborne noise mitigation for the closest receivers on the eastern side of the site that will experience extended exposure to the project works is provided in the form of a 3 metre high noise wall for residences directly opposite the load area and a 2 metre high noise wall along other sections of Queen Street. Residential receivers across the train line have higher NMLs and will benefit from lower noise levels due to the separation distance.

Vibration impacts from surface works may be perceptible where vibration generating equipment such as vibratory rolling is undertaken close to the site boundary. However, cosmetic damage and human exposure risks are low.

Based on predicted noise levels, proposed construction program and sensitivity of the community to noise and vibration, this site is classed as a low to medium risk and mitigation measures in line with this classification are proposed. This includes the use of noise barriers and substitution of noisy equipment where practicable and regularly scheduled respite periods during noisy works.

The Project CEMP requires the development of a noise and vibration monitoring plan at key locations. These plans will be site specific and will be determined in conjunction with the appropriate stakeholders for each site.

7.1.2 Standard mitigation

Standard noise mitigation measures described in **Table 7-1** should be implemented at all stages of the project in addition to those described in the project Construction Noise and Vibration Management Plan (CNVMP).

In line with CoA D42 best practice construction methods will be implemented where reasonable and feasible to ensure noise is maintained at a practical minimum. Practices will include:

- use of regularly serviced low sound power equipment;
- Permanent and temporary noise barriers (including the arrangement of plant and equipment) around noisy equipment and activities; and
- use of alternative construction techniques.

Equipment would be selected with consideration of noise emissions and the quietest equipment that can do the job would be chosen. Ripping will be used as an alternative to rock hammers during excavation where possible.

As part of the monitoring program, equipment would be regularly reviewed against expected sound power and maximum levels given in the CNVS. The quietest versions/models of commonly available equipment, such as compressors, generators, vacuum trucks and excavators would be selected preferentially where practicable.

Construction programming will ensure only activities established as low impact would be undertaken outside standard hours. Where noisier works are unavoidable, community consultation and AA and ER input and EPA approval will be sought to minimise impacts on the community.

Use of noise mats and hoarding around noisy activities provides both an acoustic benefit and a visual indicator to the public that all reasonable and feasible measures are being undertaken.

Hoarding has been recommended where it provides a material benefit. Additional noise mats will be installed in all reasonable and feasible situations where a discernible benefit to sensitive receivers is achievable.

Table 7-1 Standard mitigation measures

Measure	Description
Administrative	
Construction hours	 As much work as possible will be programmed during approved hours. Where work outside approved hours is proposed, this will be completed in line with the CNVMP and Out of hours works protocol.
	When working near schools, regard for exam periods and other noise/vibration sensitive times will be given, with programming considering feedback from consultation
	When working outside churches, particularly noisy activities will be undertaken outside scheduled service times where reasonable and feasible.
	 In accordance with CoA D36, noisy activities as defined in the ICNG, such as concrete cutting, will be undertaken on a 3 hours on, with a minimum cessation of work of not less than one (1) hour., unless otherwise approved.
	 In line with the CNVMP, nearby receivers should be notified of the upcoming works, including the duration and predicted level of impact.

Detailed noise and vibration impact statement

Measure	Description
Community consultation	 In line with the CNVS, community consultation will be undertaken regarding the DNVIS and proposed mitigation such as respite offers
Site induction	Site Environmental Induction should be delivered to the team and should include consideration and awareness of noise impacts.
Cumulative impacts	 Programming for works undertaken outside approved hours will also consider works being undertaken by third parties
Behaviour	Avoid yelling and swearing near sensitive receivers.
Noise control	
Equipment selection	 Priority will be given to the use of quieter and less vibration emitting construction methods and plant alternatives where feasible and reasonable. All equipment shall be well maintained, including mufflers and any noise suppression All equipment will meet the maximum sound power requirements of Table 13 of the CNVS. Trucks approaching construction sites will avoid the use of compression braking
Noise barriers	 Traffic management signage vehicles shall be padded to reduce rattling as much as possible. Use temporary noise screens and enclosures as much as possible to reduce noise emissions from equipment when stationary or operating in one location for a reasonable duration. Screens (such as Echobarrier) should be placed between source and receivers, be continuous (without gaps) and installed according to manufacturer directions.
Use and siting of plant	 Plant used intermittently to be throttled down or shut down. Switch engines off when not in use for a short time (e.g. 15 minutes) Noise-emitting plant to be directed away from sensitive receivers where possible. Stationary plant should be located behind a structure or enclosed if practicable. Avoid compression breaking on approach to the site.
Non-tonal reversing alarms.	Non-tonal reversing beepers (or equivalent) must be fitted and used on all construction vehicles and mobile plant regularly used on site and for any out of hours work.
Monitoring	
Noise monitoring	 Noise monitoring shall be completed to: verify assumptions of this DNVIS regarding estimated equipment noise emissions, ensure compliance with the NMLs, as required by the AMM for each assessed activity and as required by the NVMP and associated monitoring program.
Vibration monitoring	 Attended vibration measurements would be undertaken at the commencement of vibration generating activities within safe working distances shown in Appendix B. Where there is potential for exceedances of criteria vibration, site law investigations would be undertaken to determine site-specific safe working.

7.1.3 Additional mitigation measures

Additional noise mitigation measures described in the CNVS AMMM should also be implemented as indicated in Appendix A for each receiver. AMM for each receiver is indicated by colour-coding as per the AMMM in Table 4-2.

Based on the timing of the construction activities in this DNVIS, which are predominantly during approved hours, AMMM would be largely limited to notifications and monitoring. Where works are undertaken outside approved hours, additional notification would likely be required as well as ensuring appropriate respite is provided. Alternative Accommodation is not likely to be needed; for works assessed in this DNVIS however, this will be reviewed on a case-by-case basis. Alternative accommodation is likely to be offered for work

outside the scope of this DNVIS such as out of hours utility relocations and this will be assessed through the out of hours work process.

For vibration, AMM should be applied for sensitive receivers where measurement indicates it is applicable. In this case, measurement means either at a single location, which also indicates the likely level (and relevant AMM) at other similarly exposed locations or as established by site law measurements to indicate which receivers would be within the site-specific safe working distances.

7.1.4 Monitoring

Several assumptions have been made in this assessment to provide representative predictions, such as work location, equipment types, numbers, intensity of operation and noise screening options and these will be verified once works commence and regularly throughout the program.

Noise and vibration monitoring will be undertaken in line with the Noise and Vibration Monitoring Program and out-of-hours protocol as appropriate, with the following monitoring to be completed as a minimum.

- Sound power level verification to ensure equipment meets the requirements of the CNVS
- Compliance monitoring at nearby sensitive receivers to verify predictions at various stages of construction.
- Ground-borne noise and vibration monitoring to verify predicted levels and maintain compliance with objectives.

Vibration

• To verify predicted levels and assist in meeting objectives. This will be done as new vibration intensive activities commence such as ground compaction and percussive drilling. Monitoring locations will be at the nearest sensitive receiver or at the closest boundary if private property access is unavailable.

Continuous monitoring

• Locations for long-term noise and vibration monitoring are indicated in the monitoring program. Following the DNVIS assessment, these locations remain relevant. Specific locations will be selected in consultation with the land holder and AA and will be based on power requirements, security and access. Data from this monitoring will be readily available as required in the CNVMP and Monitoring Program.

7.1.5 Consultation

Condition of Approval D43 requires mitigation measures presented in this DNVIS to be identified through consultation with the affected community. This applies to standard hours and works outside standard hours and all mitigation measures developed as part of this DNVIS have been formed around community needs and concerns established through the community consultation process, as required by CoA D43.

AFJV place manager's presence on site since 25 October 2021 and issue of various communication materials has resulted in identification of several property owners around Queen Street and Pomeroy Street with particular sensitivities to out of hours work.

AFJV has met with Our Lady of the Assumption Catholic Primary School in Hamilton Street and The McDonald College in George Street, both of which are adjacent to the construction site, and commenced early dialogue regarding the construction timeline, traffic and pedestrian changes and

Detailed noise and vibration impact statement

haulage routes. The general school community is very interested in any noise and vibration impacts, including out of hours work from the project.

Tailored communications will continue with stakeholders to ensure all disruptive activity is communicated clearly in advance to minimise any impact on the functions of these educational facilities.

Properties on Queen Street have also been door knocked to discuss property condition surveys, utility relocation and major excavation work including expected milestones and timelines. Businesses along Queen Street are generally supportive of the project but may be sensitive to noise or vibration disruptions to their day to day operations. Banter Speech and Language have requested additional communications to ensure their clients are not disrupted by the work and this requirement has been communicated to the wider construction team.

AFJV will continue to consult with the community about planned out of hours works by providing regular updates to the community about upcoming out of hours activities, associated impacts and mitigation measures being implemented as well as invite ongoing feedback to be provided via email, 24-hour phone line or in person meetings. A Community Open Day will be held to allow interested members of the public to visit the site, view the latest construction progress and meet the team. An out of hours work lookahead of no less than 3 months will be provided to the community on a quarterly basis while site-based email and Sydney Metro Connect App updates will provide regular updates on progress of current out of hours work as well as upcoming work.

The North Strathfield site-specific newsletter with information about expected out of hours work was distributed in June 2023. Information obtained from the ongoing engagement will be considered as the out of hours scope of work is confirmed and where appropriate, targeted mitigation measures would be implemented.
